Instructions for correctly applying Blackbird Racing graphics:

Initial notes:

Blackbird Racing uses high-quality materials, tested by the world's top teams. Nevertheless, there are a few simple rules that should be followed:

- always make sure your hands are clean.
- apply the graphics at a temperature of between 15 and 25°C.
- do not use water or any other type of liquid to apply the graphics.
- ensure the surface they are to be applied to is perfectly clean. For this purpose, our specific product (pre-sticker preparation) may be used.

How to Apply:

- 1 – Remove the clear protective film on the front of the graphic (if present).
- 2 – Peel back a strip (3 or 4 cm) of the siliconized paper backing of the sticker.
- 3 – Position the graphic, lining it up correctly, on the plastic.
- 4 – Once the sticker is lined up correctly, press down on the part of the adhesive backing from which you have pulled back the film.
- 5 – Remove the rest of the siliconized paper, pressing down on the graphic in the same direction.
- 6 – Heat the graphic using a regular hairdryer, then press down on it again.
